SLATEFIX 2

Double Slate Panel

## ABOUT AIRTILE SLATEFIX 2

Airtile SlateFix 2 double slate panel is an alternative modern day traditional slate. The unique double slate format has only 7 slates per m<sup>2</sup>, allowing for fast and easy installation, at only 11kg/m<sup>2</sup>. The Airtile SlateFix 2 can be used on roofs where a lightweight roof is required such as, roof renovations, garden buildings, conservatories, non-traditional houses and lean-tos to name a few.

The high performing Airtile SlateFix 2 can be fixed to roof pitches as low as 15°, fully dry fixed, DIY friendly and does not break or crack like traditional slates.

The double slate is easy to cut using a fine-toothed jigsaw, or tin snips and comes with a large range of accessories and can be fixed using nails or fasteners.

The built-in camber allows for a tighter fit, the tough and durable double slate gives great security and is made from high-quality green coat steel, which provides buildings with high colour retention and long lasting finishes in any weather. This eco-friendly coated steel featured a "bio-based" technology coating, reducing the environmental impact and allows for greener living.
